➤ PROJECT 1

Title: News App

Summary: *This news app is using News Api to give accurate and latest new about all topics.*

Description: *My news app, developed using Android Studio and the Java programming language, is a powerful tool for delivering the latest news and information to users on the Android platform. My News App have features like:*

- *The app uses a robust and efficient architecture to consume data from a news API.*
- *The app also uses a SQLite database and the Room library for data storage and retrieval.*
- *The app also includes a feature that allows users to receive push notifications when new news articles are published.*

Link: *See my project from [here](#)*

➤ PROJECT 2

Title: Student Study Portal in Django

Summary: *This website is useful for student for study material*

Description: *This student study portal, developed using the Django web framework, is a comprehensive tool for helping students manage their studies and stay organized. The portal provides a range of features and functionality, including:*

- *A user authentication system that allows students to log in and access their personal information and course materials.*
- *There is video section from where user can watch educationally video about any topic through our site.*
- *A discussion forum where students can communicate and collaborate.*
